

BESAW TIRE PLANT WILL SOON INSTALL ITS EQUIPMENT

The Besaw Tire and Rubber Co., which has been under construction in Ardmore for some time, has the machinery and equipment now en route which will be installed in its new factory in the industrial addition to Ardmore. It is expected to be in operation by summer with a large initial payroll.

This company has a tire and rubber factory in Hartselle, Ohio, which has been manufacturing tires for a number of years and it was through the efforts of a few citizens of this city that a plant was built here.

S. A. Apple and I. M. Putnam while visiting the Hartselle, Ohio, plant two years ago, became enamored with the work of the company and immediately began negotiations to have this company build a factory in Ardmore. The factory was built in Ardmore on the promise of the public to subscribe to \$80,000 worth of its stock.

The building of the factory in the industrial addition was begun some time ago, but on account of the war, and the inability to secure material, work was suspended. It has now been resumed, however, and the factory proper is just about completed.

Mr. Besaw has a patent process for the manufacture of automobile tires, which is composed of one-

third asphalt and two-thirds rubber. This eliminates a large portion of the cost of manufacturing and also makes a more serviceable tire, as is proven by several severe tests made by business men of this city. This tire is equal by no other manufactured and owing to the use of asphalt is much cheaper in price.

Walter S. Gilbert, fiscal agent for the company, had a set of tires made for his Buick car and drove it through from Chicago to Ardmore, with the result that the wear on the tires could hardly be noticed. Edward Galt had an old tire resurfaced with the new preparation and has been using it for some time on the right rear wheel of his big Packard. Another make of tire is on the other rear wheel and is about worn out, but the old tire that was resurfaced shows hardly any trace of wear. The invention is really a wonderful one and it is hard to estimate the total savings of automobile tires by this new invention.

This process for making tires is of special interest to the people of this district, due to the fact that there are large deposits of asphalt in this county which can and will be used in the manufacture of the new tires. This will add another industry to this city and one that will be very profitable to the citizens.

ENGLAND WAS MAKING A SUPER-BIG BERTHA

London, Jan. 17.—A big gun which was expected to be of even greater power than the "Big Bertha" was among the secret productions of the Sheffield cannon works, it became known today. This gun which, it is said, was to have been used to bombard Rhine towns, was about 83 feet long, 14 inches weight, presumably when mounted, is given as 124 tons.

It was stated officially today that the cannon would carry 50 miles, but the men working on it were of the opinion that it probably would be destructive at 90 miles. The end of the war came before the gun could be put into action.
